

# ONLINE BOOK RENTING APPLICATION

---

# IDEA

---

- The idea of the project is quite simple.
- It is designed to help manage the book rental business.
- The main objective of the project is to produce a web-based system that enables its users to rent a book online.
- An online book rental allows hiring a book for a specific amount of time
- There is a fee to use the book for a certain date range, this date range is generally a few weeks or a few months.
- It serves the people who require books only for a limited amount of time.
- It also enables people to donate their books if they are no longer required.
- This website can be of great use for people who think buying books is a redundant expenditure as they will not be of any use after some time.

# SCOPE

---

- The system is a web platform so it can be accessible 24/7.
- Add or Remove.
- Reasonable prices
- Donate option
- Availability of new & old books
